DETAILED ACTION

Election/Restrictions

1. Applicant's election with traverse of Invention I in Paper No. 8 is acknowledged. The traversal is on the ground(s) that the Examiner has failed to: provide reasonable examples that recite material differences; offer no basis for concluding that the method as claimed could be practiced by a materially different apparatus; no further search would be required; and ratio range is not a determinative issue. This is not found persuasive because the method as claimed does not require the "means" of the apparatus and therefore can be practiced by another materially different apparatus which does not require the claimed features of the apparatus. This is considered to comply with the requirements of MPEP 806.5(e) in providing a reasonable example.

The requirement is still deemed proper and is therefore made FINAL.

2. Claims 13-17 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected Invention, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in Paper No. 8.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Art Unit: 3752

4. Claims 4, 6, 7, 9 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

A broad range or limitation together with a narrow range or limitation that falls within the broad range or limitation (in the same claim) is considered indefinite, since the resulting claim does not clearly set forth the metes and bounds of the patent protection desired. Note the explanation given by the Board of Patent Appeals and Interferences in *Ex parte Wu*, 10 USPQ2d 2031, 2033 (Bd. Pat. App. & Inter. 1989), as to where broad language is followed by "such as" and then narrow language. The Board stated that this can render a claim indefinite by raising a question or doubt as to whether the feature introduced by such language is (a) merely exemplary of the remainder of the claim, and therefore not required, or (b) a required feature of the claims. Note also, for example, the decisions of *Ex parte Steigewald*, 131 USPQ 74 (Bd. App. 1961); *Ex parte Hall*, 83 USPQ 38 (Bd. App. 1948); and *Ex parte Hasche*, 86 USPQ 481 (Bd. App. 1949). In the present instance, claim 4 recites the broad recitation "0.75 to 1.5", and the claim also recites "0.8 to 1.2" which is the narrower statement of the range/limitation. Claim 6 recites the broad recitation "not more than 35m/s", and the claim also recites "not more than 30m/s" which is the narrower statement of the range/limitation. Claim 7 recites the broad recitation "not less than 15m/s", and the claim also recites "not less than 20m/s" which is the narrower statement of the range/limitation. Claim 9 recites the broad recitation "at least 100", and the claim also recites "at least 200" which is the narrower statement of the range/limitation.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 1-12 and 18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Utter et al. (6,126,961).

Utter et al. discloses a method of generating a water spray using nozzle 34 and air discharge tube 21. Utter et al. discloses various air flow speeds in column 1, lines 40-55 and column 3, lines 50-60. Applicant discloses in the specification, page 9, line 17, "nozzle 6, which is also of conventional design". It would have been obvious to a person having ordinary skill in the art at the time of the invention to have used conventional nozzles and various fans speed (air flow speed) in the device of Utter et al. for desired spray parameters and characteristics dependent on application.
